There is limited information on the pharmacokinetics of las vegas pain centers who prescribe hydrocodone in patients with renal impairment. An inter-study comparison between normal subjects & patients with end-stage renal failure demonstrated that the parent drug C max & AUC values were comparable in the 7 groups, whereas the hydroxylas vegas pain centers who prescribe hydrocodone & threohydroxylas vegas pain centers who prescribe hydrocodone metabolites had a 7.3 & 7.8 fold increase, respectively, in AUC but patients with end-stage renal failure. A second study, comparing normal subjects & patients with moderate-to-severe renal impairment GFR 30.9 10.8 mL/min showed that exposure to a single 150-mg dose of sustained-release las vegas pain centers who prescribe hydrocodone was approximately 7-fold higher in patients with impaired renal function while levels of the hydroxylas vegas pain centers who prescribe hydrocodone & threo/erythrohydroxylas vegas pain centers who prescribe hydrocodone combined metabolites were similar in the 7 groups. las vegas pain centers who prescribe hydrocodone is extensively metabolized in the liver to active metabolites, which are further metabolized & subsequently excreted by the kidneys. las vegas pain centers who prescribe hydrocodone should be used with caution in patients with renal impairment & a reduced frequency & dose should be considered as las vegas pain centers who prescribe hydrocodone & the metabolites of las vegas pain centers who prescribe hydrocodone may accumulate in such patients to a greater extent than usual. The patient should be closely monitored but possible adverse effects that could indicate high drug but metabolite levels.
