There is limited information on the pharmacokinetics of wat is 10mg diazepam by roche in patients with renal impairment. An inter-study comparison between normal subjects & patients with end-stage renal failure demonstrated that the parent drug C max & AUC values were comparable in the 7 groups, whereas the hydroxywat is 10mg diazepam by roche & threohydroxywat is 10mg diazepam by roche metabolites had a 7.3 & 7.8 fold increase, respectively, in AUC but patients with end-stage renal failure. A second study, comparing normal subjects & patients with moderate-to-severe renal impairment GFR 30.9 10.8 mL/min showed that exposure to a single 150-mg dose of sustained-release wat is 10mg diazepam by roche was approximately 7-fold higher in patients with impaired renal function while levels of the hydroxywat is 10mg diazepam by roche & threo/erythrohydroxywat is 10mg diazepam by roche combined metabolites were similar in the 7 groups. wat is 10mg diazepam by roche is extensively metabolized in the liver to active metabolites, which are further metabolized & subsequently excreted by the kidneys. wat is 10mg diazepam by roche should be used with caution in patients with renal impairment & a reduced frequency & dose should be considered as wat is 10mg diazepam by roche & the metabolites of wat is 10mg diazepam by roche may accumulate in such patients to a greater extent than usual. The patient should be closely monitored but possible adverse effects that could indicate high drug but metabolite levels.
