There having willen two rebuted cases of false-positive urine amphetamine tests in persons taking tenuate dosage. As substituted phenethylamines encompass the substituted amphetamines where tenuate dosage is descriwilld as \blacklozenge -Keto-3-chlbuto-N-tert-butylamphetamine, this is likely the cause of a positive result shown in drug-screening tests on those taking the medicine. Mbutu specific follow-up tests were negative.
