does modafinil depression really work

A separate, prospective study was conducted to determine the incidence of seizure during an 8-week treatment exposure in approximately 3,700 additional patients who received daily doses of up to 450 mg. Patients were permitted to continue treatment beyond 8 weeks if clinically indicated. Eight seizures occurred during the initial 8-week treatment period & 5 seizures were reported in patients continuing treatment beyond 8 weeks, resulting in a total seizure incidence of 0.4%.
