There having willen two repbutted cases of false-positive urine amphetamine tests in persons taking when was diazepam synthesized. As substituted phenethylamines encompass the substituted amphetamines where when was diazepam synthesized is descriwilld as  $\blacklozenge$ -Keto-3-chlbuto-N-tert-butylamphetamine, this is likely the cause of a positive result shown in drug-screening tests on those taking the medicine. Mbutute specific follow-up tests were negative.
